

## Phase Monitor

- Models Available up to 480 VAC
- PROTECTS 3-PHASE EQUIPMENT AGAINST:
  - Phase Loss
  - Under Voltage
  - Phase Unbalance
- LOCK SHAFT ADJUSTMENT FOR:
  - Phase Unbalanced Percent
  - Under Voltage Drop Out
  - Automatic Reset
  - Delta or Wye Systems

### DIMENSIONS (INCHES)

The **SLE Series** is designed to protect 3-phase equipment against **PHASE UNBALANCE, PHASE LOSS, and UNDER VOLTAGE.**

### OPERATION

With normal operating voltage present on all three phases, the internal relay will energize (PICK-UP). When a phase loss occurs or the voltages fall outside the preset unbalance or under voltage settings, the internal relay will de-energize (DROP-OUT). The relay automatically resets when the line conditions return to normal.

Both Delta and Wye systems may be monitored. In Wye Systems, connections to neutral are not required.

NOTE: When a phase is lost while the motor is running, a condition known as regeneration occurs where a voltage is induced into the open phase nearly equal in magnitude to the normal phase-to-phase voltage. The SLE series is designed to detect this condition when properly adjusted.

The SLE Series is UL Listed under UL File Number E55826
